PROJECTS

Biobliofile | www.bibliofile.info

Use Bibliofile to find, organize, and share reading material. Mongo/Express/Node/React, React-Bootstrap, the Google Books API, ag-Grid, Firebase Auth, Twilio, and Nodemailer. Hosted with AWS EC2 using Docker.
repo: <https://github.com/LBDCode/bibliofile>

brewIt + public API | www.brewit.tech

brewIt allows users to search a database of homebrewing recipes, or sign up for the public API and build their own app. Python, Flask, PostgreSQL, Flask-Login, Flask-Mail, Flask-CORS, BeautifulSoup, Jinja2, Bootstrap. Hosted with AWS EC2 using Docker.
repo: https://github.com/LBDCode/brewit_refactor

Recipedia | www.my-recipe.com

Recipedia is a collaboration with three other developers that aims to make the process of finding recipes, planning meals, and managing grocery lists easier. Mongo/Express/Node/React, Material-UI, the Edamam recipe and nutrition API, Firebase Auth, Twilio, and Nodemailer. Hosted with AWS EC2.
repo: <https://github.com/LBDCode/Project3>

Schedulr | <https://app-schedulr.herokuapp.com>

Targeted at small businesses, Schedulr helps user book and manage appointments, while also keeping their customers up-to-date. Built with three other developers, Schedulr uses MySQL/Express/Node, jQuery, Handlebars, Bootstrap, Passport Auth, Nexmo, HTML, and CSS.
repo: <https://github.com/LBDCode/GroupProject-2>
